

Lightning Systems Charging Management Software

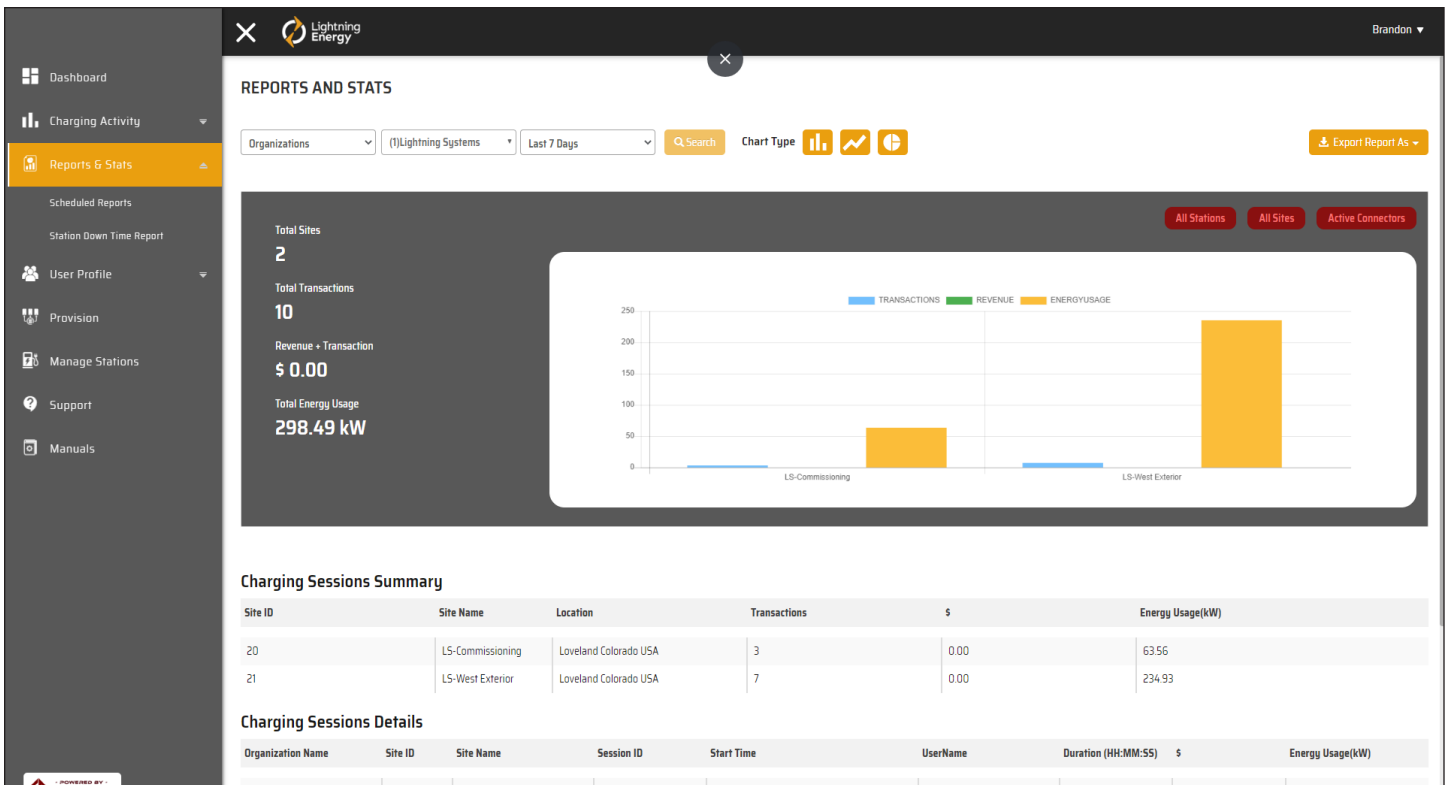

The customizable dashboard provides at-a-glance information

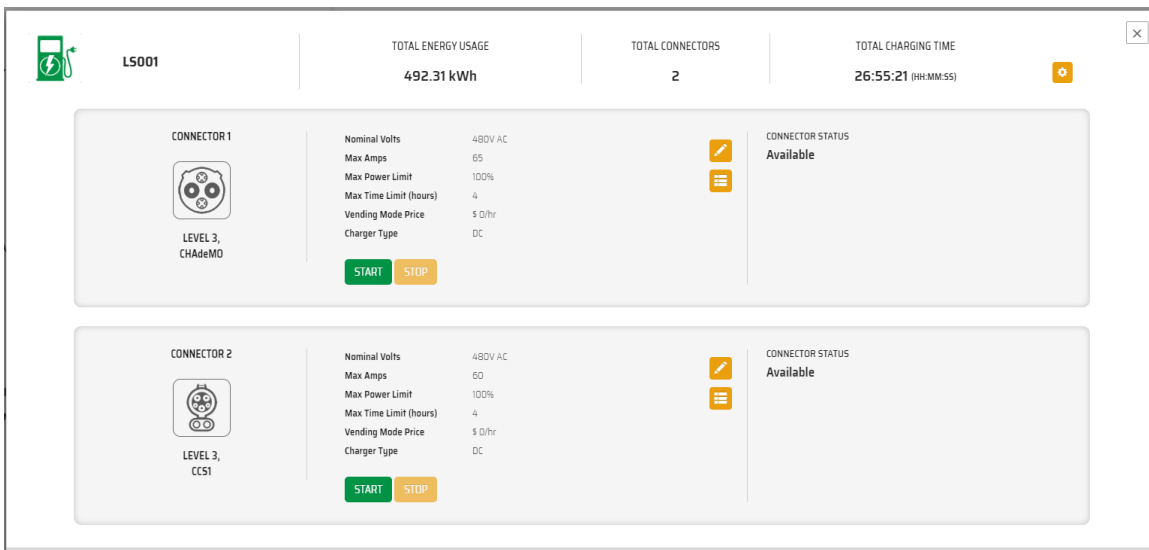

Lightning Systems offers Charging Management Software so you can get the best value from your charging stations. Accessible online through a web browser with no need to install anything on your computers, this software provides comprehensive control for your chargers, including access control, scheduling to avoid peak tariffs, and much more. Real time statistics and a customizable dashboard let you see at a glance how your fleet is using energy, giving you the opportunity to optimize your charging procedures to maximize vehicle uptime and minimize costs.

Included in Lightning's Charging As A Service (CaaS) offering, or available as a standalone subscription, this software is a powerful tool for electric fleet success.

- ✓ Access management
- ✓ Tracking and reporting of energy usage, transactions, driver activity, etc.
- ✓ Real time reports and statistical analysis
- ✓ Remote diagnostics
- ✓ Scheduling of charger availability
- ✓ Demand management
- ✓ Payment processing (for public / retail settings)
